

Ten top tips

to keep your field-erected Alfa Laval Niagara WSAC system in tip top condition

1. Ensure proper water treatment and blowdown.
2. Make sure the spray-water pressure and the basin's water level are correct. Adjust the float valve if necessary.
3. Check spray pump screens for debris and clean as necessary.
4. Check process temperatures and pressures – inlet and outlet.
5. Check the tube surfaces for debris and scale. Clean as necessary.
6. Check spray nozzles to ensure good spray coverage. Contact Alfa Laval Niagara Service for cleaning and replacement options
7. Check rotating equipment (fans, motors, pump skid) for noise or excessive heat. Lubricate motors as required.
8. Have a trained professional check the electrical system periodically.
9. Maintain stock of essential spare parts with long lead times.
10. Let an Alfa Laval Niagara equipment specialist perform regular condition audits to optimize maintenance and performance.
